

Front-to-back compliance

By combining Corlytics' digitized regulations service with Solidatus' advanced governance and lineage capabilities, joint customers can map global regulations to their entire data estates, aligning them with systems, policies, processes, and personnel. With this framework in place, they can perform real-time assessments of regulatory changes, demonstrate full compliance, and streamline their processes.

- Gain access to more than 2,000,000 regulatory texts across 1700 regulators.
- Map over 5000 digitized regulations, rulebooks and laws - all of which are updated automatically.
- Cut costs by 75% by reducing time-intensive, manual compliance work.
- Enhance reporting consistency and efficiency by reusing standardized compliance assets across regulations and regulators.

Create a holistic view of compliance

- Create a connected, regulatory data blueprint by automatically integrating metadata from disparate inventories such as policies, reports, processes, systems, dataflows, and risk and controls.
- Link internal policies to relevant regulatory texts and enable policy owners to show that they are suitable and accurate.
- Provide total transparency for executive decisionmakers, board members and regulators, showing that critical data and underlying sources are well-known and controlled.

Conduct rapid regulatory impact assessments

- Review up-to-date regulations and highlight the impacts of changes in regulatory texts with your organization, tailoring them to specific business areas and requirements.
- By presenting targeted perspectives of regulatory changes on data environments, front-office staff can gain a better understanding of their impact, allowing them to seize business opportunities ahead of competitors, and drive operations more efficiently.
- Identify and understand any differences in the responses to regulatory requirements and move towards more consistent, coherent, and efficient regulatory reporting.

Collaborate across teams and build data literacy

- Coordinate, control and plan change throughout your organization regardless of the type of system, the data in use, where it is or who owns it.
- Reduce your dependency on key regulatory compliance experts.
- Keep a complete audit trail of all changes, automatically maintained, with powerful visualization functionality to display all differences along a timeline.
